

Kitchen Cabinets or Built-In Cabinet Refinishing

Cabinet Refinishing

Professional cabinet refinishing is the most inexpensive way to bring your kitchen or specific cabinet area up to date and give your cabinets a new lease on life.

Cabinets in your favorite colors can be very exciting in the kitchen and other rooms of your home or business: Yes, they can all create surprising results. Decorating magazines often show cabinets in rich finishes, colored lacquered, weathered or faux finishes.

One of the latest trends is to combine painting (custom lacquering) and staining in different areas of the same kitchen cabinets-areas, or stain in two different colors. You are only limited by your imagination! If you are not sure which color to select, our cabinet technicians and master finishers may offer color consultations, or you may want to work with and get advice from an interior designer.

For the best results, staining and or applying color lacquering to the cabinets works out best. Work done by a professional using appropriate products for final finishes results professional job that will last for many years, probably longer than the finish you currently have due to new curing and epoxies or 2 part finishes used. Of course, this will depend on the amount of traffic that goes through the kitchen or area. Just as the painted wood work and doors in your home need periodic painting, so the kitchen cabinets will also need some maintenance. An advantage to painted or lacquered cabinets is that any nicks or worn areas can be touched-up, thereby extending the life of the lacquered look.

We work closely with proven results from past experience while working in our clients home or business. We have systems already set in place to give you the ultimate end results without the horror stories you may have experienced in the past working with other companies.

After our written estimate or proposal to complete the work, we work closely with time frames so that you are getting the most results in the least time spent in your home or business.

A small to medium kitchen will take about three days to transform. Larger jobs will take from three to five days. If you have other dark wood work in your home—such as your bathrooms vanities, doors, casings, base, etc.—these areas can be either painted or custom lacquered at the same time as your cabinets, giving the whole house a new look.
